CATALOG

Like the phoenix that rises from the ashes,
we honor the farewell of our beloved pets
with dignity and respect, generating a
positive impact on the environment and
other animals

Why regenerative urns

Regenerative urns are biodegradable and compostable urns that take sustainability and the commemorative act one step further. They are urns that also help regenerate the earth and create life. They are made with organic, natural, and environmentally safe materials.

Reborn's urns are also produced sustainably and artisanally, using nature's decomposers as their base: fungi.

How regenerative urns are used

Reborn's regenerative urns are designed so that the decomposition of ashes occurs naturally and safely. Their main material, fungi, allows the ashes to be reincorporated into the environment, regenerating spaces.

The urns will only decompose in contact with moisture and water from the soil. If they remain outside this medium, the urns will maintain their original shape and appearance until families find a place for burial.

Reborn's urns are not designed to be placed in water.

ReUrn for Pets

Return to the earth,
close a cycle with love
and meaning

ReUrn for Pets

Your love and bond transforms. That is why we have created a ritualization that goes beyond farewell. Honor your bond by creating new life while helping other animals.
